Editorial Advisors

Editorial Advisors to 'Marine Ecology – Progress Series' are appointed for a four-year period. They are expected to:

- ○ critically evaluate the scientific merits of manuscripts submitted for publication
- ○ suggest topics and authors for reviews
- ○ select and present suitable high-quality manuscripts
- ○ draw attention to new facts, concepts and methods

In addition to the Editorial Advisors listed below, about 300 referees cooperate anonymously.

MARINE ECOLOGY – PROGRESS SERIES

HISTORY: 'Marine Ecology – Progress Series' (MEPS) was established in response to requests from numerous marine ecologists from all over the world. The series is based on 'Marine Ecology' – the first comprehensive, integrated treatise on life in oceans and coastal waters – conceived, organized and edited by Professor Otto Kinne, and published by John Wiley & Sons.

AIM: 'Marine Ecology – Progress Series' serves as a world-wide forum for all aspects of marine ecology, fundamental and applied. The journal covers microbiology, botany, zoology, ecosystem research, biological oceanography, fisheries, aquaculture, pollution, environmental protection, conservation and resource management.
Ecological research has become of paramount importance for man's future. The information presented here should, therefore, encourage critical application of ecological knowledge for the benefit of mankind and, in fact, of life on earth. 'Marine Ecology – Progress Series' strives for

- ◯ complete coverage of the field of marine ecology
- ◯ the highest possible quality of papers
- ◯ quick publication
- ◯ a high technical standard of presentation.

Editor and publisher attempt to achieve these goals in close cooperation with editorial advisors, referees, contributors and readers. Criticism and advice are cordially invited (please address to the editor).

SCOPE: 'Marine Ecology – Progress Series' is international and interdisciplinary. Presenting research articles, reviews and notes, it has been created for prompt publication of contributions concerned with:

Environmental Factors: Tolerances and responses of marine organisms (microorganisms, autotrophic plants, and animals) to variations in abiotic and biotic components of their environment; radioecology.

Physiological Mechanisms: Synthesis and transversion of organic material (mechanisms of auto- and heterotrophy); thermo-, ion-, osmo- and volume-regulation; stress resistance; non-genetic and genetic adaptation; population genetics; orientation in space and time; migrations; behavior.

Cultivation: Maintenance and rearing of, as well as experimentation with, marine organisms under environmental and nutritional conditions which are, to a considerable degree, controlled; analysis of the physiological and ecological potential of individuals, populations and species; determination of nutritional requirements; ecological aspects of aquaculture; water-quality management; culture technology.

Dynamics: Production, transformation, and decomposition of organic matter in marine ecosystems; food webs; trophic interrelations; population dynamics; plankton ecology; benthos ecology; estuarine and coastal ecology; wadden-sea ecology; coral-reef ecology; deep-sea ecology; open-ocean ecology; polar ecology; theoretical ecology; ecological modelling.

Ocean Management: Applied marine field ecology; inventory, protection and management of living resources in coastal areas, estuaries and open oceans; ecological aspects of fisheries; pollution of marine areas and organisms; protection of life in the seas; management of populations, species and ecosystems; management of coastal zones and sea areas.

Manuscript Preparation, Mailing and Processing

Preparation

Research articles (in general not exceeding 10 printed pages), reviews (up to 30 printed pages) and notes (1 to 3 printed pages) must be typewritten with double spacing. 'Marine Ecology – Progress Series' invites interpretative rather than descriptive contributions. Reviews should be critical, instructive evaluations of the state-of-the-art – not mere compilations of information.

Abstracts All contributions must be preceded by a brief, concise abstract. In the shortest possible way, the abstract should outline the scope of the paper and highlight its main results and conclusions.

Figures must be very carefully prepared, numbered and accompanied by brief, precise legends. For examples consult recent issues. Mark desired position of figures in the manuscript margin.

Tables should not be excessive in size. They must be numbered and be headed by brief, compendious legends. Mark desired position of tables in the manuscript margin. Unusual symbols used must be explained.

Genus and species names: underline for *italics*. Genus names should appear in full the first time mentioned in a given paragraph.

Citation of literature All literature quoted in the text must be listed, in alphabetical order of author names, at the end of the manuscript. Please abbreviate publications according to 'World List of Scientific Periodicals', latest edition, London. For examples of literature citation see below.

Mailing

Address manuscripts (original plus 2 copies) to the editor or to an editorial advisor. For safety use registered mail.

Processing

Manuscripts are critically evaluated by at least 3 reviewers. The editor then decides on acceptance or rejection. Acceptable manuscripts are usually returned to the author requesting consideration of comments and criticism. Present rejection rates range from 35 to 50 % for manuscripts from different parts of the world.

When an accepted manuscript is ready for publication, the author will be notified and the date of manuscript acceptance fixed. This date appears at the end of each printed contribution. Average time between acceptance and publication is 3 mo.

The author receives 2 sets of proofs directly from the printer. Printing errors must be carefully corrected. At this stage, stylistic changes are not acceptable without compensatory payment. Please return 1 set of proofs by air mail.

Offprints: Forty offprints (reprints) of each contribution will be made available free of charge. Additional offprints can be purchased. For offprint prices consult the form accompanying the proofs. Orders for additional offprints must be made when returning the proof (use the form provided).

'Marine Ecology – Progress Series' levies no page charge.
The last issue of each set of 10 volumes features a combined author/title index.

DO NOT JUST COPY

SUBSCRIBE!

Scientific journals are the backbone of research. Their existence depends on a sufficient number of subscribers.

Therefore:

Support the scientific journal of your choice. Subscribe to it, do not just copy its contents!

Articles published in core journals represent important sources of information which have been carefully selected, reviewed, improved, and edited by peers – acknowledged experts in the respective fields of research. Such articles bring to the attention of an international readership the crystallized endproducts of an expensive scientific process – expensive not only in terms of money but also in terms of talent, time and effort.

Modern techniques of copying increasingly endanger the economic basis of professional scientific journals. Researchers may lose this basic instrument unless they are willing to support the journal of their choice by subscription.
